

Unrivaled Microsoft 365 Purview Reporting

See the full picture of your M365 eDiscovery environment in one place

Unified case intelligence

Hold health monitoring

Search and export verification

Custodian insights

Audit log retention and visibility

Permission transparency

With eDig365, oversight becomes effortless

View cases, legal holds, searches, exports, and audit logs in a user friendly reporting application. Built for legal, compliance, audit, and IT teams, **eDig365** delivers the visibility native Microsoft 365 tools can't – helping you make faster, better informed decisions.

Why it matters

Microsoft's built-in tools are designed to execute tasks, not to generate reports. The result? Gaps in oversight and slow manual processes. Blind spots and missed red flags increase both risks and costs.

eDig365 closes these gaps by providing new levels of observability within your Microsoft 365 Purview environment.

Stay ahead of compliance and litigation risks

Your organization can't afford to be blindsided by missed holds or hidden misuse of permissions. **eDig365** quickly surfaces:

- Actionable failed or incomplete legal hold reports
- Custodians and locations held longer than necessary
- Permissions abuse and insider threats within Purview
- Easy to read audit logs for every case, hold, search, and export

Instant insights. No scripting. No waiting.

eDig365 is deployed in your organization's Azure environment. There's no need to manually compile reports. Instead, you get:

- Unified visibility into searches, holds, and exports across cases
- Easily identify failed holds and over-held locations
- Transparency into Microsoft's most powerful permissions
